

Generative AI Question Concepts Cards

Visual Learning Guide

A privacy-first, browser-based flashcard system for mastering AI concepts.

Version 1.0 • Companion App Documentation

Executive Summary

What It Is

A mobile-first, single-page HTML5 web application. It replaces re-reading long passages with curated concept “cards”—infographics and metadata mapped to Chapters 1–4 of the companion guide.

Who It Is For

Knowledge Workers: Fast visual refreshes of core topics.

Instructors: Presentation tool for group discussions.

Mobile Learners: Responsive study via swipe navigation.

Why It Matters

High-signal visuals tailored for quick absorption.

No installation required.

Privacy-focused architecture.

Private, Secure, and Local by Design

The application runs entirely in the client browser with no external dependencies.

- ✓ **No Accounts Required:** Zero barriers to entry; no login walls.
- ✓ **No Server-Side Data:** User activity is not tracked or sent to a cloud server.
- ✓ **Local Storage:** The “Review List” (user progress) is stored specifically in the browser’s local storage on the device.

App Anatomy & Interface

Zone 1: Top Bar

Contains Chapter Tabs (Ch 1–4) and the “Review Toggle” (View Review / Exit Review).

Contains Chapter Tabs (Ch 1–4) in Inter

Technical data in JetBrains Mono

Zone 2: Center Card

Primary focus. Displays Section Tag (e.g., 1.1), Title, the Image Panel, and the mapped-sections description.

Section Tag

Title

Tip Text

Navigating the Knowledge Base

Selecting Content: Users tap Chapter Tabs (Ch 1–4) to load the first card of that module.

Desktop / Laptop

Click on-screen buttons (← / →) or use Keyboard Arrow keys for rapid browsing.

Phone / Tablet

Swipe Left to advance to next card.
Swipe Right to return to previous card.

Deep Focus: The Full-Screen Viewer

Some AI infographics contain dense information requiring closer inspection. Tap or click the card image to launch the modal viewer.

Mobile:

Standard pinch-to-zoom; drag to pan.

Desktop:

Use on-screen controls (– / + / Reset).

Native Option:

Use the “Open” button to view raw image in a new tab.

Building Your Review Stream

Illustrating the state change of the 'Review' button.

STEP 1

✓ Mark Review

Action: Select the button on any card.

STEP 2

Added to Review

✓ In Review

State Change: Button updates, toast confirms, and bottom-bar counter increments.

****Persistence**:** Data remains in the browser's local storage even after a refresh.

Managing Your Review Session

Ch 4

View Review

Exit Review

Accessing the Stream

Click 'View Review' in the Top Bar. The interface shifts to show *'only'* the marked items from all chapters in a single continuous stream.

Refining the List

While in Review mode, clicking '✓ In Review' removes the item instantly.

Exiting

Click 'Exit Review' to return to standard Chapter browsing.

Turning Insights into Action (Export)

Control Reference Matrix

	Desktop / Laptop	Phone / Tablet
Switch Chapters	Click Tabs	Tap Tabs
Navigate	Keyboard Arrows or Click Buttons	Swipe Left / Right
Viewer	Click to open, ESC to close	Tap to open, Pinch to zoom
Export	Click 'Download' or 'Copy'	Tap buttons in bottom bar

Deployment: Running Locally

The app loads data dynamically. Opening `index.html` directly via `file://` will fail due to CORS security.

Windows Setup

1. Unzip the project.
2. Double-click `start-server.bat`.
3. Runs on `http://127.0.0.1:5500/`.

macOS / Linux Setup

1. Open Terminal in project folder.
2. Run command:

```
python3 -m http.server 5500  
--bind 127.0.0.1
```

Deployment: Hosting on GitHub Pages

1. Repository Setup

Keep `index.html` at the repository root.

2. Version Control

```
git add .
git commit -m "Deploy: Initial commit"
```

Commit full folder structure.

3. Enable Pages

Enable Pages in Settings (Deploy from Root).

CRITICAL WARNING: CASE SENSITIVITY

GitHub Pages is Linux-based and case-sensitive. Ensure image filenames in your folders match the entries in `data.json` exactly. Example: `Image.png` $\neq$ `image.png`.

Troubleshooting & Support

Error: Could not load data.json

LABEL

Cause:

Opening via `file://` protocol.

Fix:

Use a local server or GitHub Pages.

Error: Broken Images

LABEL

Cause:

Filename mismatch.

LABEL

Fix:

Verify PNGs in `chapterX` folders match JSON exactly (case-sensitive).

Issue: Review List Disappears

LABEL

Cause:

Browser storage cleared.

LABEL

Fix:

Data is local to the specific browser profile and device.

Best Practices for Visual Learning

Facilitation Tip:

Use the full-screen viewer's zoom/pan features to point out specific elements during team workshops.

Your Visual AI Companion

Visual: High-signal infographics mapped to guide sections.

Private: No data collection, local storage only.

Flexible: Works on mobile, desktop, and tablet.

Open: Easy to export data and host locally.

Designed for modern learners, AI professionals, and instructors.
